

Miskar Gas Field Development - Tunisia

GAS

BG

The Miskar Gas Field is located in the Mediterranean Sea off the coast of Tunisia. It lies in 62m of water approximately 125km offshore in the Gulf of Gabes.

The development project included a drilling and production platform linked to a new onshore terminal. A 24-inch export pipeline transmits gas and condensate under wellhead pressure to a new onshore gas plant.

Andrew Palmer & Associates and their Houston based subcontractor, Marine Pipeline Consultants Inc., were responsible for detailed design and procurement of the pipeline from the top of the riser to the delivery point at the gas plant. This included approximately 126km of subsea pipeline, a landfall on the Tunisian coast, and 10km of landline.
