Project: Magnolia, Deep Water

Began: 2007

Locations:

Garden Banks Blocks, Gulf of Mexico

- 783
- 784

Scope:

Provide personnel for the operation and maintenance of the Magnolia Deepwater production facilities.

The classification of personnel being provided to the project include:

- Offshore Installation Managers
- Barge Supervisors
- Ballast Control Officers
- Lead Operators
- A, B, C Operators
- Systems Specialists
- Maintenance Specialists
- Medics
- Clerks

Discovered in 1999, the Magnolia field is located 165 miles south of the Louisiana coastline in Garden Banks blocks 783 and 784 in a water depth of 4,700 feet. The field is being developed with eight wells tied back to the deepest TLP operation in the world. Processing facilities are designed to handle 50 MBOD and 150 MMCFD of gas (gross). First production began in 2004. Well completion activities continue.
